WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

*** Areas of "High Risk" of Significant Fire Potential due to moderately strong, gusty NW to NE winds and low RH through Tuesday***

A persistent low pressure trough over the northern Great Basin will keep the region under a rather strong northerly flow along the trough's western side. A few disturbances flowing around the trough at times may provide some light rain chances to our far northern or far eastern areas through Tuesday, otherwise it will be dry across the region. Moderately strong, gusty NW to NE winds of 10-20 mph with gusts mostly 25-35 mph are expected through Tuesday, particularly for the Mid Coast to Mendocino (NC02), Bay Area Mountains (NC03B) and Sacramento Valley/Foothills (NC05). Such conditions have led to "High Risk" of Significant Fires being designated in those areas. Locally stronger gusts up to around 45 mph are possible. Less wind and moderating humidifies should impact the area during the latter half of the week and first part of the weekend. This will result in Significant Fire Potential falling below "High Risk" thresholds. Temperatures will be near seasonal values this week.

SOUTHERN CALIFORNIA

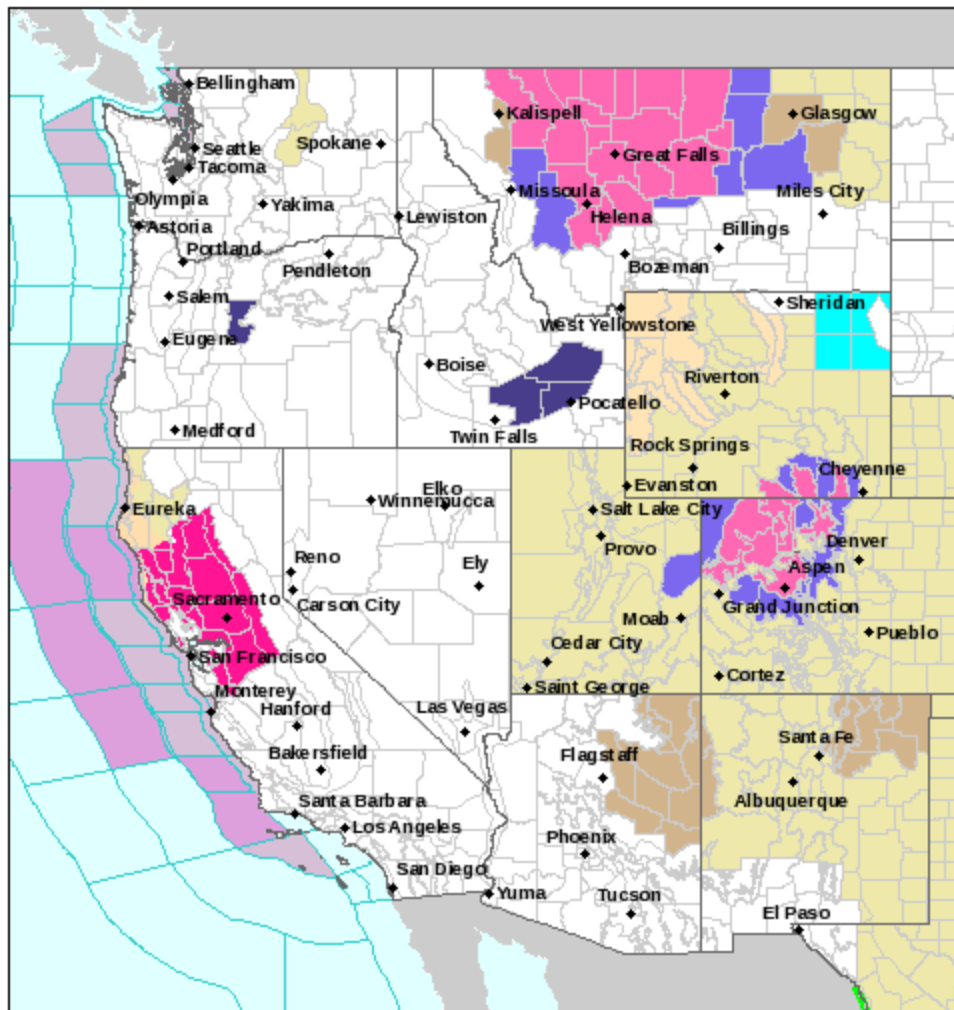

Cooler through Tuesday

Much warmer and drier by Friday

A trough over the Northern Rockies will help to form an area of low pressure over Northern California by Tuesday morning. As a result, it will be cooler over all the region in the coming days with daytime highs in the 60s in the mountains, with valley readings in the 70s to low 80s. Night and morning low clouds and fog will spread into the coastal slopes south of Point Conception through Tuesday as an eddy spins up off the coast. Elsewhere around the region, skies will be mostly clear during the next couple of days. West to northwest winds of 15 to 30 mph will occur through the Banning Pass and over the Antelope Valley and nearby Tehachapi Range today, otherwise winds will be southwest to northwest 10 to 15 mph in most places. Tomorrow, the strongest winds will be over the Mojave Desert eastward toward the Colorado River. A weak area of low pressure will remain across the northern and central portions of the state through Wednesday before being replaced by high pressure late in the week and into the coming weekend. This will signal the start of a warming trend that will be most noticeable Friday and Saturday as daytime highs climb in the 90s across many inland valley locations. Weak offshore flow at the surface Friday and Saturday will help to boost temperatures up along the coast with 80s near the beaches, especially south of Point Conception. The weak offshore flow may help to generate some locally breezy conditions below a few of the passes of Southern California during the late night and early morning hours starting Friday, but speeds should be 15 mph or less. Cooler weather is expected to return once again by early next week.
